Subject: Response to David's comments
Attachments: DBussard re 2018-05-25 Additivity Report - revised (JCS).docx

I have composed initial responses to David's comments, as 'replies' to each one in the annotated document. For the most part, his comments are reasonable and easy to accommodate. I think he missed the point on a couple, but that could be because we weren't explicit enough. Maybe we can discuss these at our next meeting.
